

Build a solid foundation for math with these four concepts:

Patterns are all around us. They teach us how to make predictions. Look for patterns and make some of your own.

Shapes help us to identify letters and to categorize. Look for triangles, circles, rectangles and other shapes

Sorting teaches children organization and observation. Sort toys, household items, and books by size, colour, texture..

Counting is the foundation of math. Concepts of more and less and one-to-one relationships are developed

Develop these concepts as you play, shop and do laundry together!
